Part D: File Management

Create:

- notes.txt
- commands.txt
- report.txt

Perform:

- **Create files**
Using "touch"
touch notes.txt commands.txt report.txt
- **Copy files**
Using "cp"
cp notes.txt notescopy.txt
- **Move files**
Using "mv"
mv notes_copy.txt ../Linux/
- **Rename files**
Using "mv"
mv report.txt final_report.txt
- **Delete files**
Using "rm"
rm delete.txt

```

Part F: Linux Research Activity

Research and explain:

1. What is Linux?

Linux is a free and open source operating system created by Linus Torvalds in 1991.

2. Why is Linux important in Cyber Security?

Linux is important in cyber security because many security tools are designed to run on Linux systems. It provides powerful command line utilities, strong permission controls, and a highly customizable environment.

3. Difference between Linux and Windows.

Linux is opensource OS so we can see and mess with the code. Windows is closed, made by Microsoft. Linux lets us customize it more and is usually safer, but Windows is way easier for normal people and runs more programs.

4. What is a Linux Distribution?

It is a complete operating system built on the Linux kernel, it includes system tools, software packages, and a desktop environment.

5. Why do Ethical Hackers prefer Linux-based operating systems?

Ethical hackers prefer Linux cuz it gives easy access to all the powerful security and networking tools. We also get way more control over the system, can automate stuff with scripts, and customize everything exactly how we want it.
